EXPERIMENT 4

ROLL NO: 240701339 NAME: MUKESH V

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups using proto.io

Aim:

The aim of this experiment is to design and develop a mobile application prototype for an e-commerce platform using Proto.io.

The objective of this prototype is:

- To design a simple and user-friendly shopping interface
- To understand mobile navigation structure
- To implement menu-based navigation
- To create product browsing and selection screens
- To simulate the online ordering process
- To improve usability through structured UI design

Procedure

The following procedure was followed to complete this prototype:

1. Designing the Home Screen (Screen 1)

- Created the initial landing page.
- Added an "AMAZON" logo in the center.
- Added an "ORDER" button below the logo.
- Designed the screen with a simple background to focus user attention.
- Set navigation from the ORDER button to the next screen.

This screen acts as the starting point of the application.

2. Creating the Navigation/Menu Screen (Screen 2)

- Designed a side navigation layout.
- Added user profile section with email display.
- Included menu options such as:
    - Shopping
    - Location (T Nagar)
    - Near to the Signal
    - Routes
    - Settings

    - Help
    - Send Feedback
- Added a bottom navigation bar with icons.
- Included a floating action button (+) for additional actions.

This screen represents the main navigation structure of the application.

3. Designing the Category Screen (Screen 3)

- Created a Shopping page header.
- Added multiple product categories:
    - Saree
    - Camera
    - Phone
    - Tablet
- Each category contains 19 photos (as shown).
- Enabled selection to navigate to product listing.

This screen allows users to browse product categories.

4. Designing Product Listing Screen (Screen 4)

- Created a product results page titled "Living Room".
- Displayed "Found 23 products".
- Added product cards with:
    - Product image
    - Product name
    - Product description (two-seat sofa)
- Displayed different sofas:
    - Orange sofa
    - Grey sofa
    - Red sofa
    - Green sofa

This screen shows available products in grid format for easy comparison.

5. Refining Product Display (Screen 5)

- Improved UI with darker header theme.
- Maintained product grid layout.
- Simplified design to focus more on product visuals.
- Removed extra textual information for cleaner interface.

This screen enhances visual appeal and usability.

6. Final Screen (Screen 6)

- Represents the final stage of the prototype.
- Acts as a placeholder for further development (such as checkout or order confirmation screen).

Result

The mobile e-commerce application prototype was successfully designed using Proto.io.

The prototype includes:

- A clear landing page
- Structured navigation menu
- Category browsing system
- Product listing with images
- Grid-based layout for better comparison
- Consistent header and navigation design
- User-friendly interface

The overall design demonstrates:

- Proper mobile UI hierarchy
- Easy navigation flow
- Simple and intuitive user experience
- Logical progression from Home → Menu → Categories → Products

Thus, the objective of designing a structured and functional e-commerce mobile prototype was successfully achieved.
